

AMENDMENTS TO THE SPECIFICATION

Please replace the paragraph beginning at page 7, line 10, with the following rewritten paragraph:

In a second variation, the system, which is configured to determine the performance of a mobile terminal within a wireless communications network, may comprise a first message receiving unit for receiving messages transmitted via the communications network associated with user transactions, a second message receiving unit for receiving messages transmitted via the communications network associated with mobile terminal type information, a correlating unit for correlating data within the received user transaction messages with data within the mobile terminal type information messages, and a derivation unit for deriving one or more performance indicators by mobile terminal type information from the correlated data. ~~a derivation unit for deriving, from the received user transaction messages, one or more performance indicators for the user transactions, and a correlation unit for correlating the performance indicators regarding the user transactions with data within the mobile terminal type information messages.~~
